Wednesday, September 15-1920.

The board met in adjourned regular session, all the commissioners present, and Commissioner and Chairman A. Andrews presiding.

Order of Court of Industrial Relations in Matter of Removal of Fill.

The order of the Court of Industrial Relations with reference to cutting down the fill used as the north approach to the old bridge across the Kansas River at Lawrence, was received, read & ordered included in the minutes of the board of this date. The order follows, to-wit:

In the Court of Industrial Relations, State of Kansas.

In the matter of the application of the Kaw Valley Drainage District for the removal of certain obstructions in the channel of the Kansas River at Lawrence, Kansas. } Docket No. 3031.

Order.

Now on this 9th day of September, the above entitled matter comes on for hearing and final order by the court, and it appearing that after due hearing of the matter, a stipulation has been filed with the court, signed by all the parties at interest, and providing that the fill in the Kansas River below the bridge at Lawrence, Kansas, which was used as an approach to the old bridge, shall be cut down and removed so that its height at its south end where it joins the dam shall not exceed three (3) feet above the top of the dam and that it shall slope upward for approximately one hundred and twenty (120) feet so that it shall not exceed seven (7) feet above the top of the dam at the north end thereof, and that the Bowersock Mills & Power Company agree to cut down and remove at its own cost and expense said fill as above indicated and to begin work thereon not later than September 1-1920, and to push forward the work with due diligence and speed.

The Court finds: That the north approach to the old bridge now used as the north abutment of the present dam, owned and operated by the Bowersock Mills & Power Company, should be removed insofar as provided in the above stipulation.

The Court finds further that there should be no obstructions of any kind attached to the present bridge which would in any way interfere with the discharge of water under the bridge or the water ways provided for in plans for the new bridge heretofore approved by the public utilities Commission under docket No. 1100.

It is therefore by the Court considered and ordered: That the fill in the Kansas River below the bridge at Lawrence which was used as a north approach to the old bridge shall be cut down and removed so
